

Most Innovative Energy Efficient Glass Product

Solar Roadways

July 6, 2014

COMMERCIAL, RETAIL, FABRICATION : GLASS MAGAZINE AWARDS 2014

Jockimo Inc., www.jockimo.com

Jockimo Inc. has partnered with Solar Roadways, www.solarroadways.com, to create solar-powered, intelligent parking lots and roadways.

Jockimo is the sole provider of specialty glass for the project. The glass supplier, in conjunction with Solar Roadways, developed a cast textured glass surface that can handle heavy traffic while allowing sunlight to pass through to solar cells beneath.

The strong, thick tempered glass has been traction tested, load tested, and impact tested to meet the requirements of roadway conditions. The panels are equipped with a warming element that melts snow and ice in winter months. LED lights can also be incorporated into the panels.
